PREFACE

This report presents statistics on the number of inhabitants of the State, its counties, and minor civil divisions (townships, etc.). In addition, separate figures are also presented for urban places, wards of cities of 5,000 or more, and other areas of the State. These data are based upon tabulations from the Seventeenth Decennial Census of the population of the United States, its Territories, and possessions conducted as of April 1, 1950. Provision for the Seventeenth Decennial Census was made in the act providing for the Fifteenth and subsequent decennial censuses which was approved on June 18, 1929.

The major portion of the information compiled from the Census of Population of 1950 will appear in Volume I, *Number of Inhabitants*, and in Volume II, *Characteristics of the Population*. This report is a preprint of Chapter 20 (Maryland) of Volume I, which is to present, in a single publication, statistics on the number of inhabitants for each State.

The materials presented here will also appear as Chapter A of Part 20 (Maryland) of Volume II. Volume II will comprise a series of separately published parts, one for each State and a summary for the United States. The use of separate parts makes the basic materials on characteristics of the population for a given State available to the public in a single publication. Within the part for a State, Chapter A will recapitulate the statistics on the number and distribution of the population within a State; Chapter B will present statistics on the general characteristics of the population of the various political subdivisions of the State, such as counties, incorporated places, and the like; and Chapter C will present data on the detailed characteristics of the population of the larger areas within the State, such as cities of 100,000 inhabitants or more and standard metropolitan areas.

The materials presented here were prepared under the supervision of Howard G. Brunsman, Chief, Population and Housing Division, and Dr. Henry S. Shryock, Jr., Assistant Chief for Population Statistics, by Dr. Henry D. Sheldon, Chief, Demographic Statistics Section, and Charles P. Brinkman, Chief, Population Distribution Unit; the compilation of the statistics was under the direction of Robert B. Voight, Assistant Chief for Operations. The collection of the information on which these statistics are based was under the supervision of Lowell T. Galt, Chief, Field Division. The geographic work, including the delineation of special types of urban territory and the preparation of maps, was under the supervision of Clarence E. Batschelet, Chief, Geography Division.

- V Block Statistics

Housing statistics for census tracts are to be included in the Population reports on census tracts.

MARYLAND

Number of Inhabitants

The State.—Maryland was one of the Thirteen Original States. In 1791 its area was reduced by the formation of the District of Columbia. Its population on April 1, 1950, according to the Seventeenth Census, was 2,343,001. The State has a land area of 9,881 square miles. In 1950 there was an average of 237.1 persons per square mile as compared with an average of 184.2 in 1940. Among the States, Maryland ranked twenty-fourth in population and forty-first in land area.

Maryland had a population of 319,728 in 1790 when it was enumerated in the first Federal census (table 1). In 1950, 160 years later, its population was more than seven times as large. The 1900 population of 1,188,044 was more than three times as large as the population in 1790. The population of the State practically doubled between 1900 and 1950, with 45 percent of the increase for the 50-year period coming in the decade 1940 to 1950. The 1950 population represented an increase of 521,757, or 28.6 percent, over the 1,821,244 persons enumerated in 1940. Both the numerical increase and rate of growth for the decade were the largest in the history of the State. In the first 140 years of its history, the intercensal rates of growth for Maryland were below those of the Nation as a whole. In the following two decades, however, the rates of growth for Maryland exceeded those for the Nation.

Usual place of residence.—According to usual Census practice, which dates back to 1790, each person enumerated in the 1950 Census was counted as an inhabitant of his usual place of residence or usual place of abode, which is generally construed to mean the place where he lives and sleeps most of the time. This place is not necessarily the same as his legal residence, voting residence, or domicile, although, in the vast majority of cases, these different bases of classification would be identical.

In the application of this rule, persons were not always counted as residents of the places in which they happened to be found by the census enumerators. Persons in places where guests usually pay for quarters (hotels, etc.) were enumerated on the night of April 11, and those whose usual place of residence was elsewhere were allocated to their homes. Visitors found staying in private homes, however, were not ordinarily interviewed there. Information on persons away from their usual place of residence was obtained from other members of their families, landladies, etc. If an entire family was expected to be away during the whole period of the enumeration, information on it was obtained from neighbors. A matching process was used to eliminate duplicate reports for persons who reported for themselves while away and were also reported by their families at home.

Persons in the Armed Forces quartered on military installations were enumerated as residents of the States, counties, and minor civil divisions in which their installations were located. Members of their families were enumerated where they actually resided. In the 1950 Census, college students living away from home were considered residents of the communities in which they were residing while attending college, rather than as persons temporarily absent from their parental homes as was the practice in 1940. In 1950 the crews of vessels of the American Merchant Marine in

harbors of the United States were counted as part of the population of the ports in which their vessels were berthed on April 1, 1950. In 1940 such persons were treated as part of the population of the port from which the vessel operated. Inmates of institutions, who ordinarily live there for long periods of time, were counted as inhabitants of the place in which the institution was located; whereas patients in general hospitals, who ordinarily have short stays, were counted at, or allocated to, their homes. All persons without a usual place of residence were counted where they were enumerated.

Urban and rural population.—The 1950 urban population of Maryland comprised 1,615,902 persons, or 69.0 percent of the population of the State (table 1). This population was living in the 33 urban places in the State and in other territory included in the urban fringe of the Baltimore Urbanized Area and the Maryland part of the urban fringe of the Washington, D. C., Urbanized Area. More than 87 percent of the urban population of the State was living in these urbanized areas (table 2).

The rural population of Maryland comprised 727,099 persons, or 31.0 percent of the population of the State (table 1). Of the rural population, 57,949 persons, or 8.0 percent, were living in 25 incorporated and 13 unincorporated places of 1,000 to 2,500 inhabitants (table 2).

Urban definition.—Under the urban definition established for use in the 1950 Census, the urban population comprises all persons living in (a) places of 2,500 inhabitants or more incorporated as cities, boroughs, towns,¹ and villages; (b) the densely settled urban fringe, including both incorporated and unincorporated areas, around cities of 50,000 or more; and (c) unincorporated places of 2,500 inhabitants or more outside any urban fringe. The remaining population is classified as rural. According to the urban definition used in previous censuses, the urban population comprises all persons living in incorporated places of 2,500 inhabitants or more and areas (usually minor civil divisions) classified as urban under special rules relating to population size and density.

In both definitions, the most important component of the urban territory is the group of incorporated places having 2,500 inhabitants or more. A definition of urban territory restricted to such places, however, would exclude a number of equally large and densely settled places, merely because they were not incorporated places. Under the old definition, an effort was made to avoid some of the more obvious omissions by the inclusion of the places urban under special rules. Even with these rules, however, many large and closely built-up places were excluded from the urban territory. To improve the situation in the 1950 Census, the Bureau of the Census set up, in advance of enumeration, boundaries for urban-fringe areas around cities of 50,000 or more and for unincorporated places outside urban fringes. All the population residing in urban-fringe areas and in unincorporated places of 2,500 or more is classified as urban according to the 1950 definition. (Of course,

¹ Except in New England, New York, and Wisconsin, where "towns" are minor civil divisions of counties and are not necessarily densely settled centers like the towns in other States.

the incorporated places of 2,500 or more are urban in their own right.) Consequently, the special rules of the old definition are no longer necessary.

According to the new urban definition, the 1950 urban population of Maryland consisted of the following components: (1) The 1,215,258 inhabitants of the 31 incorporated places of 2,500 inhabitants or more; (2) the 7,958 inhabitants of the 2 specially delineated unincorporated places of 2,500 inhabitants or more; and (3) the 392,686 persons living in other territory in the urban fringe of the Baltimore Urbanized Area and the Maryland part of the urban fringe of the Washington, D. C., Urbanized Area. Under the old definition, there were two places urban under special rule in Maryland. These places, district 12 and district 13 in Baltimore County, had a combined population of 59,360. The urban population under the old definition, therefore, consisted of the population of the 31 incorporated places of 2,500 inhabitants or more and the 59,360 inhabitants of the places urban under special rule. Under the new definition 56,469 inhabitants of the two places urban under special rule were included in the urban population because they were living in the urban fringe of Baltimore. The remaining 2,891 inhabitants of these places were classified as rural. The net gain in the urban population of the State resulting from the change in definition, therefore, was 341,284.

Although the Bureau of the Census has employed other definitions in the course of its history, the statistics on the population by urban and rural residence for the years 1790 to 1940 are shown in accordance with the 1940 definition. The 1950 statistics are shown in accordance with both the new and old definitions.

Trends of urban and rural population.—Trends in the urban and rural population can be examined only on the basis of the old definition. On this basis, the urban population more than doubled between 1900 and 1950, rising from 591,206 to 1,274,618 (table 1). The largest 10-year gain and the most rapid rate of increase of the 50-year period came between 1910 and 1920, when the number of persons living in urban territory increased by 211,230, or 32.1 percent. The gain of 194,267 between 1940 and 1950 represented an increase of 18.0 percent over the 1940 urban population of 1,080,351. College Park town, which was incorporated in 1945, had a 1950 population of 11,170. All but 1 of the 10 other incorporated places of 10,000 inhabitants or more in the State shared in the growth of the urban population, with the rates of gain ranging from 2.5 percent for Cambridge town to 127.5 percent for Mount Rainier city (table 4). The proportion of the population of Maryland living in urban territory increased from 49.8 percent in 1900 to 54.4 percent in 1950. It had been as high as 60.0 percent in 1920.

The rural population of Maryland, which was 596,838 in 1900, increased to 1,068,383 in 1950 (table 1). Seven-tenths of the increase over the 50-year period came in the decade 1940 to 1950, when the rural population increased by 327,490, or 44.2 percent, over the 1940 population of 740,893. The decade marked the third successive intercensal period in which the rural population increased at a more rapid rate than the urban population and the second time in the history of the State that the numerical increase in the rural population exceeded the gain in the urban population.

Counties.—There are 23 counties and one independent city—Baltimore—in Maryland. The counties ranged in size from Calvert with a population of 12,100 to Baltimore with a population of 270,273. Between 1940 and 1950, 20 of the counties and Baltimore city increased in population. Sixteen of the counties which gained were among the 18 counties which had had increases in the previous decade. The rates of change for the counties ranged from a decline of 3.3 percent for Garrett County to an increase of 117.0 percent for Prince Georges County. The largest numerical increase was experienced in Baltimore County, which had a gain of 114,448. Well over four-fifths of the population gain for the State was accounted for by Baltimore city and Anne Arundel, Baltimore, Prince Georges, and Montgomery Counties.

Minor civil divisions.—To the primary political divisions into which counties are subdivided, the Bureau of the Census applies the general term "minor civil divisions." The minor civil divisions in Maryland are the election districts. The incorporated cities (except Baltimore), towns, and villages form subdivisions of the election districts.

Table 6 shows the statistics on the population of each county by minor civil divisions for the last three censuses. The population of each incorporated place (except Baltimore) and unincorporated place is shown in *italics* under the population of the minor civil division in which it is located. When an incorporated place or an unincorporated place lies in two or more minor civil divisions, the population of the several parts is shown in table 6 in the appropriate counties and minor civil divisions, and each part is designated by "part." Figures on the total population of such places are given in table 7. Unincorporated places are designated by "uninc." Changes between the 1940 Census and the 1950 Census in the boundaries of areas listed are shown in footnotes to table 6. For changes in boundaries prior to the 1940 Census, see reports of the Sixteenth Census (1940), *Population*, Vol. I, pp. 465-467, and reports of earlier censuses.

Incorporated and unincorporated places.—In 1950 there were 149 places in Maryland incorporated as cities, towns, and villages. There were also 15 unincorporated places of 1,000 inhabitants or more. There were 1,310,869 persons living in the incorporated places, 95,611 of whom were in the 118 places of fewer than 2,500 inhabitants. Of the 28,762 inhabitants of the unincorporated places, 20,804 were in the 13 places of 1,000 to 2,500 inhabitants. The incorporated places ranged in size from Highland Beach town with a population of 5 to Baltimore city with a population of 949,708.

Political units recognized as incorporated places in the 1950 Census are those which are incorporated as cities, boroughs, towns, and villages with the exception that towns are not recognized as incorporated places in the New England States, New York, and Wisconsin.

The Bureau of the Census has delineated boundaries for the thickly settled urban fringe around cities of 50,000 or more and has also delineated boundaries for unincorporated places of 1,000 or more which are densely settled population centers without corporate limits. Although there are unincorporated places within the urban fringe, it was not feasible to establish boundaries for such places and therefore they are not identified as separate places.

The count of urban places in the 1950 Census comprises all incorporated places of 2,500 or more regardless of location and unincorporated places of 2,500 or more which are located outside the urban-fringe areas. Incorporated places of less than 2,500 which lie in the urban fringe are not recognized as urban places.

Urbanized areas.—There was one urbanized area entirely within Maryland and one partially within the State. The Baltimore Urbanized Area had a population of 1,161,852, and the Maryland part of the Washington, D. C., Urbanized Area had a population of 253,423. Of the 1,415,275 persons in the State in the urbanized areas, 949,708 were in Baltimore, the only central city in Maryland, and 465,567 were in the urban-fringe areas. The urban-fringe areas had 96,049 persons living in 27 incorporated places and 369,518 in the unincorporated parts (tables 2 and 9).

Each urbanized area contains at least one city with 50,000 inhabitants or more in 1940 or according to a special census taken since 1940, and some urbanized areas contain two or more cities of 50,000. Each urbanized area also includes the surrounding closely settled incorporated places and unincorporated areas that meet the criteria listed in the section below on "Urban fringe." Thus, the territory of an urbanized area may be classified into incorporated parts and unincorporated parts. (See urbanized area maps.)

An urbanized area also may be divided into central city or cities and urban fringe as defined below.

Central cities.—Although an urbanized area may contain more than one city of 50,000 or more, not all cities of this size are necessarily central cities. The largest city of an area is always a central city. In addition, the second and third most populous cities in the area may qualify as central cities provided they have a population of at least one-third of that of the largest city in the area and a minimum of 25,000 inhabitants. The names of the individual urbanized areas indicate the central cities of the areas.

Urban fringe.—The urban fringe includes that part of the urbanized area which is outside the central city or cities. The following types of areas are embraced if they are contiguous to the central city or cities or if they are contiguous to any area already included in the urban fringe.

1. Incorporated places with 2,500 inhabitants or more in 1940 or at a subsequent special census conducted prior to 1950.

2. Incorporated places with fewer than 2,500 inhabitants containing an area with a concentration of 100 dwelling units or more with a density in this concentration of 500 units or more per square mile. This density represents approximately 2,000 persons per square mile and normally is the minimum found associated with a closely spaced street pattern.

3. Unincorporated territory with at least 500 dwelling units per square mile.

4. Territory devoted to commercial, industrial, transportation, recreational, and other purposes functionally related to the central city.

Also included are outlying noncontiguous areas with the required dwelling unit density located within $1\frac{1}{2}$ miles of the main contiguous urbanized part, measured along the shortest connecting highway, and other outlying areas within one-half mile of such noncontiguous areas which meet the minimum residential density rule.

¹ According to the new urban definition, the urban population comprises persons residing in urban territory but not necessarily in an urban place, which is defined as an incorporated place of 2,500 or more, or an unincorporated place of 2,500 or more located outside an urbanized area. Under the old definition, incorporated places of 2,500 or more and places under special rule are classified as urban places.

² Includes 392,680 persons in urban territory outside of urban places.

³ Includes population of present area of the District of Columbia.

BALTIMORE URBANIZED AREA MAP

The Baltimore Urbanized Area, for which statistics are shown in table 9, is depicted in the following map. The shaded areas, in combination, comprise the urbanized area. To assist in locating the exact external boundaries of the areas, each boundary feature (street segment, political boundary, or other) has been assigned a number. The boundary segments thus numbered are shown on the map and the features to which they apply are presented in the following key.
